Declassification Review by NIMA / DoD

13 August 1965

Copy 9

MEMORANDUM FOR: NSA/TCO

25X1A

ATTENTION :
THROUGH :
SUBJECT : Study of Peng Pu, China
REFERENCE :
(NPIC Project 35001-6)

25X1D

1. In response to the referenced requirement, a detailed PI study was made of the city of Peng Pu (Pang-Fou), China at 32-57N/117-22E and the surrounding area that is covered by Mission to determine whether any special weapons construction activity or any unusual activity can be observed.

2. The analysis revealed no activity that can be associated with nuclear or special weapons nor any unusual construction activity or features.

3. Further analysis revealed that 24 new dispersed, revetted hardstands have recently been built approximately 1.5 nm SSW of the Pang-Fou Airfield, probably to replace the original 20 hardstands clustered between the airfield and associated barracks. At the date of the mission the new hardstands were not in use as evidenced by the fact that planes are visible in the original hardstands only.

4. The only other significant construction activity, though apparently not associated with any special weapons activity, is the construction of 3 new railroad bridges across irrigation canals 2 and 3 nm north of Pang-Fou apparently for the purpose of adding another track to the single line railroad leading north from the city.
